

MEDICARE REFORM & G2211 CODE

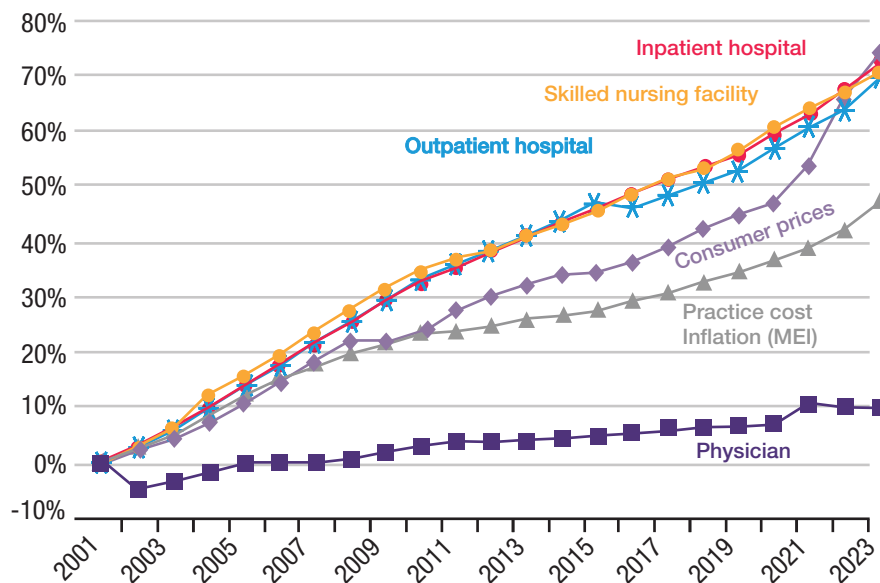

Every year, physicians face unsustainable cuts to Medicare reimbursement.

In 2024, CT surgeons are facing a **3% reduction** in payment caused by a lack of an inflationary update and stringent budget neutrality requirements.

Medicare physician payments have lagged **26% behind** the rate of inflation growth since **2001**.

Medicare updates compared to inflation (2001-2023)*

G2211 Add-on Code

90% of budget neutrality cuts in 2024 stem from the implementation of the flawed and previously delayed complexity add-on code G2211.

G2211 is duplicative of existing codes and would penalize all physicians due to a reduction in the Medicare conversion factor.

What Can You Do?

Delay or halt the implementation of the flawed complexity add-on code G2211 to eliminate a majority of the expected 2024 Medicare physician payment cut.
