Uhlig PN., et al. (2010) [Patient safety is evolving: comment on "A novel method for reproducibly measuring the effects of interventions to improve emotional climate, indices of team skills and communication, and threat to patient outcome in a high-volume thoracic surgery center"](#). Arch Surg. 145(5):495. No abstract available.

Wahr JA, Prager RL, et al. (2013) [Patient safety in the cardiac operating room: human factors and teamwork: a scientific statement from the American Heart Association](#). American Heart Association Council on Cardiovascular Surgery and Anesthesia, Council on Cardiovascular and Stroke Nursing, and Council on Quality of Care and Outcomes Research. Circulation 128(10):1139-69. doi: 10.1161/CIR.0b013e3182a38efa.

The [STS News special edition on patient safety](#) published in September 2006 was a major statement by the organization on the importance of patient safety and its implications in cardiothoracic surgery. As leaders in safety and quality of our surgical procedures and our advocacy for our patients, this is another natural challenge for us to accept. DeLeval's article (listed below) is a must-read as well.
