

Society of Thoracic Surgeons

Congenital Heart Surgery Database
Monthly Webinar

July 16, 2024

Agenda

- Welcome and Introduction
- STS Update
- STS Data Manager Education (Chasity Wellnitz and Leslie Wacker, CHSD Consultants)
 - Ascending Aorta Replacement Case Review
- Q&A

STS Updates

- July Training Manual posted
- Spring 24 Harvest (Surgery dates 1/1/2020 – 12/31/2023)
 - Data Analysis complete and IQVIA is working to upload data into the platform
 - UAT – Report QC in progress
 - Report release date TBD – *more information coming soon!*
- Fall 24 Harvest is underway
 - Surgery dates 7/1/2020 – 6/30/2024
 - Harvest close is September 27 @ 11:59pm Eastern

2024 Harvest Schedule

| Term | Harvest Submission Window Close | Opt-Out Date | Includes Procedures Performed Through: | Report Posting |
|-------------|---------------------------------|--------------|--|----------------|
| Spring 2024 | 3/22/2024 | 3/26/2024 | 12/31/2023 | Summer 2024 |
| Fall 2024 | 9/27/2024 | 10/1/2024 | 6/30/2024 | Winter 2024 |

Data Submission Open is continuous for all harvest terms. Data Submission Close occurs at 11:59 p.m. Eastern on the date listed.

Ascending Aorta procedures

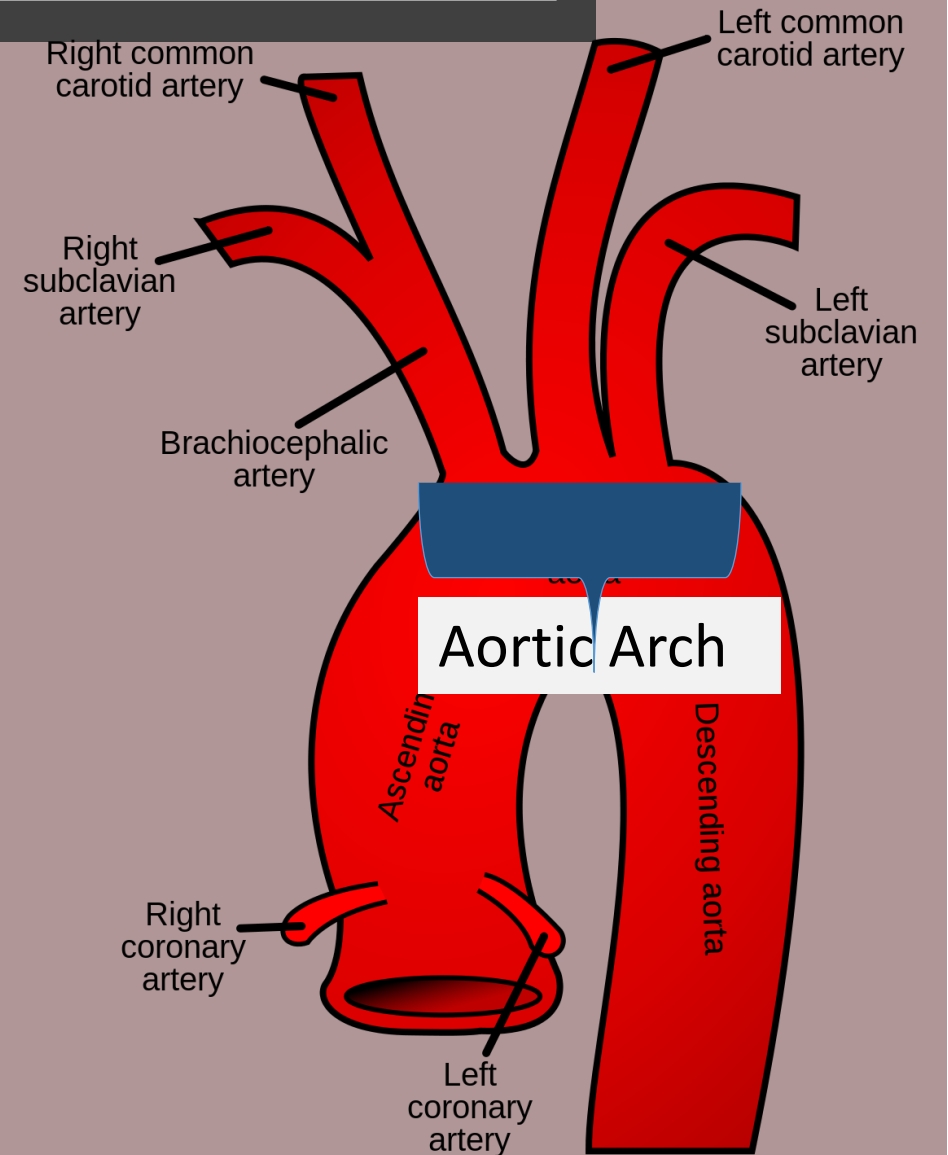

Ascending Aorta procedures

Ascending Aorta procedures

Ascending Aorta procedures

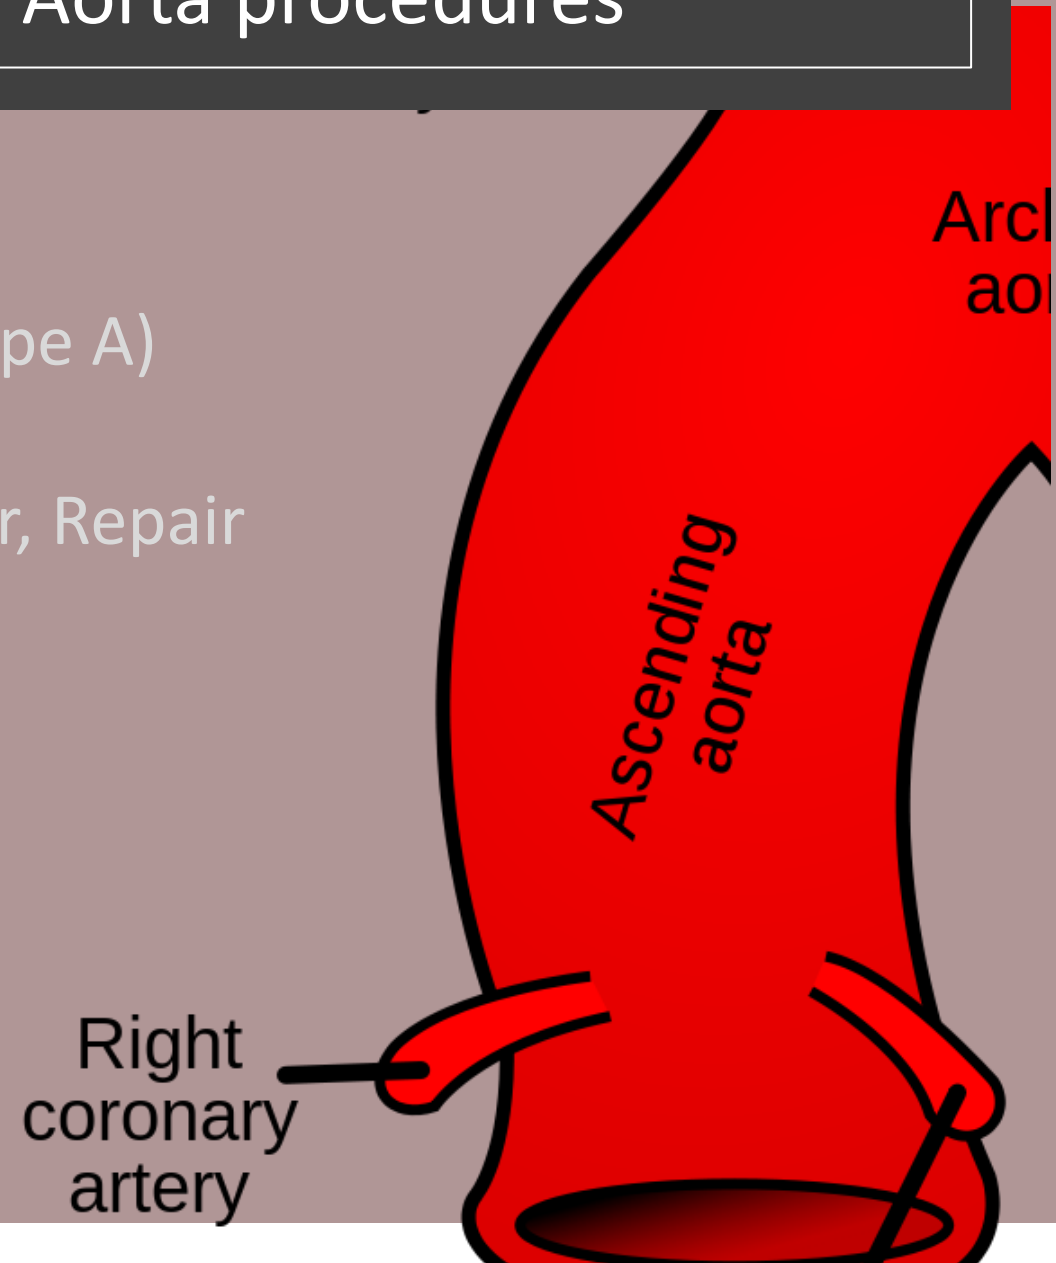

Ascending Aorta procedures

1. Aortic dissection repair (Type A)
2. Aortic aneurysm repair
3. Aortic stenosis, Supravalvar, Repair
4. Aorta, Other

Ascending Aorta procedures

1. Aortic dissection repair (Type A)
2. Aortic aneurysm repair
3. Aortic stenosis, Supravalvar, Repair
4. Aorta, Other

Ascending Aorta – Case #1

13 year old patient with Marfan syndrome presents with aortic root aneurysm and dilated ascending aorta. She is the first member of her family with this condition; gene testing was complete with variants noted in FBN2, FBN1, and FLNA genes of unknown significance. Further review pending.

Ascending Aorta – Case #1

13 year old patient with Marfan syndrome presents with aortic root aneurysm and dilated ascending aorta. She is the first member of her family with this condition; gene testing was complete with variants noted in FBN2, FBN1, and FLNA genes of unknown significance.

Further review pending.

What is the patient's diagnosis?

- a) Marfan syndrome
- b) Aortic stenosis, Supravalvar
- c) Aortic aneurysm
- d) Aortic root dilation

Ascending Aorta – Case #1

13 year old patient with Marfan syndrome presents with aortic root aneurysm and dilated ascending aorta. She is the first member of her family with this condition; gene testing was complete with variants noted in FBN2, FBN1, and FLNA genes of unknown significance. Further review pending.

What is the patient's diagnosis?

- a) Marfan syndrome
- b) Aortic stenosis, Supravalvar
- c) Aortic aneurysm**
- d) Aortic root dilation

Ascending Aorta – Case #1

What is the patient's diagnosis?

- a) Marfan syndrome
- b) Aortic stenosis, Supravalvular
- c) Aortic aneurysm**
- d) Aortic dissection

| | | |
|------|--|---|
| 1110 | Aortic aneurysm (including pseudoaneurysm) | An aneurysm of the aorta is defined as a localized dilation or enlargement of the aorta at any site along its length (from aortic annulus to aortoiliac bifurcation). A true aortic aneurysm involves all layers of the aortic wall. A false aortic aneurysm (pseudoaneurysm) is defined as a dilated segment of the aorta not containing all layers of the aortic wall and may include postoperative or post-procedure false aneurysms at anastomotic sites, traumatic aortic injuries or transections, and infectious processes leading to a contained rupture. |
|------|--|---|

Ascending Aorta – Case #1

What is the patient's diagnosis?

- a) Marfan syndrome
- b) Aortic stenosis, Supravalvular
- c) Aortic aneurysm**
- d) Aortic dissection

Ascending Aorta – Case #1

What is the patient's diagnosis?

- a) Marfan syndrome
- b) Aortic stenosis, Supravalvar
- c) Aortic aneurysm**
- d) Aortic root dilation

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

Which is **NOT** part of the patient's diagnosis list?

- a) Aortic valve, Bicuspid
- b) Aortic, neo-aortic or truncal valve insufficiency and stenosis
- c) Aortic aneurysm
- d) Aortic, neo-aortic or truncal valve, Other

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

Which is **NOT** part of the patient's diagnosis list?

- a) **Aortic valve, Bicuspid**
- b) Aortic, neo-aortic or truncal valve insufficiency and stenosis
- c) Aortic aneurysm
- d) Aortic, neo-aortic or truncal valve, Other

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

- W
- a) Aortic
 - b) Aortic
 - c) Aortic
 - d) Aortic

| | | |
|-----|--|---|
| 620 | Aortic, neo-aortic or truncal valve, Other | Aortic/neo-aortic/truncal valve pathology not otherwise specified in diagnosis definitions (590) Aortic valve atresia, (600) Aortic, neo-aortic or truncal valve insufficiency, or (610) Aortic, neo-aortic or truncal valve insufficiency and stenosis. <u>Coding Notes:</u> See General Information Valve Related Diagnosis for more information. |

sis

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

Patient undergoes a Ross procedure with reinforced autograft and an ascending aorta replacement.

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

Patient undergoes a Ross procedure with reinforced autograft and an ascending aorta replacement.

Which procedures should be listed in the procedure list?

- a) Ross
- b) Aortic stenosis repair, Supraaortic
- c) Aortic aneurysm repair
- d) A) and C)

Ascending Aorta – Case #2

37 year old patient with bicuspid aortic valve, aortic stenosis, aortic insufficiency, and ascending aorta and aortic root aneurysm.

Patient undergoes a Ross procedure with reinforced autograft and an ascending aorta replacement.

Which procedures should be listed in the procedure list?

- a) Ross
- b) Aortic stenosis repair, Supravalvar
- c) Aortic aneurysm repair
- d) A) and C)**

Ascending Aorta – Case #2

740

Ross procedure

Replacement of the aortic valve with a pulmonary autograft and replacement of the pulmonary valve with a homograft conduit.

Coding Notes:

Do not list the pulmonary homograft conduit placement as a separate procedure. The conduit related details can be included in the valve section of the database.

In the event a Ross procedure is completed in a patient ≥ 6575 days (≥ 18 years), do not list the associated root replacement as a separate procedure. The root replacement information can be included in the Aorta Procedure section; code field Aorta Procedure Performed (SeqNo 1765) as Yes and within the aorta procedure section, code field VS-Aortic Root Procedure (SeqNo 3900) as Yes (update Nov-23).

| <input type="checkbox"/> | Unicuspid valve disease | | | | | | | | | |
| <input type="checkbox"/> | Degenerative- Commissural rupture disorder | | | | | | | | | |

Aortic Val/Asc Aor Doppler:

Peak velocity across valve: 3.59 m/s Peak grad. 52 mmHg Mean grad. 27 mmHg
 Pressure recovery: 10 mmHg Pred. peak-peak: 42 mmHg
 Aortic Valve Area (VTI) 0.93 cm²

Semilunar Valves:

There is a normal appearing and normal size pulmonary valve. There is no pulmonary valve stenosis. There is trivial (normal finding) pulmonary valve regurgitation.

There is moderate to severe aortic valve stenosis. The peak instantaneous gradient across the aortic valve is 52 mmHg. There is mild aortic valve regurgitation. There is no aortic sinus dilation. The aortic valve is likely bicommissural and is heavily thickened (likely calcified) with limited excursion. Reported annulus dimension may be an underestimate (due to echobright thickening of the leaflets at the annulus). Aortic valve gradient may underestimate degree of stenosis (calculated valve area 0.93 cm²).

VALVE, PULMONARY ALLOGRAFT W/ CONDUIT >27MM FROZEN - S12695833
 Inventory Item: VALVE, PULMONARY ALLOGRAFT W/ CONDUIT >27MM FROZEN
 Implant name: VALVE, PULMONARY ALLOGRAFT W/ CONDUIT >27MM FROZEN - S12695833
 Manufacturer: CRYOLIFE M
 Action: Implanted
 Device Identifier:
 Lot no.: 12695833

Serial no.: 12695833
 Laterality: Midline
 Date of Manufacture:
 Number Used: 1
 Device Identifier Type:
 Exp. Date: 11/7/2028

Model/Cat no.: SGPV00XL
 Area: Pulmonary Valve

Supplier: CRYOLIFE CARDIOVASCULAR INC

(updated July 2024)

Descriptions:

- Zone 0 Below sinotubular junction (STJ): the boundary between the aortic root and the ascending aorta. The aortic root, aortic annulus, and the sinus of Valsalva are below the STJ and are in Zone 0 (see figure).
- Zone 0 STJ to mid-ascending: the segment of the ascending aorta between the STJ and the mid-point of the ascending aorta (i.e., proximal tubular ascending aorta) and is in Zone 0 (see figure).
- Zone 0 Mid-ascending to distal ascending: the segment of the ascending aorta between the mid-point of the ascending aorta and the origin of the innominate artery or first branch vessel off the aortic arch and is in Zone 0 (see figure).

A 26 mm Valsalva graft was used to support the autograft. Keyholes were cut in appropriate locations for the left and right coronary artery. The previously placed subannular sutures were placed through the cuff of the Valsalva graft, and the graft was positioned down onto the autograft and tied down.

The ascending aorta replacement was then performed with a separate segment of 26 mm graft. The proximal anastomosis was completed by sewing the graft to the distal end of the pulmonary autograft. The graft was trimmed to the appropriate length, and the distal anastomosis was completed between the graft and the distal ascending aorta.

Ascending Aorta procedures

1. Aortic dissection repair (Type A)
2. Aortic aneurysm repair
3. Aortic stenosis, Supravalvar, Repair
4. Aorta, Other

Ascending Aorta – Case #3

10 month old patient with William's Syndrome, supraaortic stenosis, pulmonary stenosis, LCA stenosis, and severe mitral valve regurgitation with dysplastic valve.

Patient requires patch augmentation of ascending aorta, pulmonary valve repair, patch augmentation of left coronary artery, and mitral valve repair.

Ascending Aorta – Case #3

Which is the BEST procedure to choose for ‘patch augmentation of the ascending aorta’?

- a) Ross procedure
- b) Valvuloplasty, Aortic
- c) Aorta, Other
- d) Aortic stenosis, Supravalvar, Repair

Ascending Aorta – Case #3

Which is the BEST procedure to choose for ‘patch augmentation of the ascending aorta’?

- a) Ross procedure
- b) Valvuloplasty, Aortic
- c) Aorta, Other
- d) Aortic stenosis, Supraaortic, Repair**

Ascending Aorta – Case #3

Which is the BEST procedure to choose for ‘patch

| | | | |
|----|----------|---|--|
| a) | R | Aortic stenosis, Supravalvar, Repair | Repair of supravalvar aortic stenosis involving all techniques of patch aortoplasty and aortoplasty involving the use of all autologous tissue. |
| b) | V | | In simple patch aortoplasty a diamond- shaped patch may be used, in the Doty technique an extended patch is placed (Y-shaped patch, incision carried into two sinuses), and in the Brom repair the ascending aorta is transected, any fibrous ridge is resected, and the three sinuses are patched separately. |
| c) | A | | |
| d) | A | | |

Ascending Aorta – Case #3

Other procedures performed include: pulmonary valvotomy and supraaortic pulmonary stenosis repair.

How is **pulmonary valvotomy** captured in the procedure list?

- a) Valvuloplasty, Pulmonary or neo-pulmonary
- b) PA, reconstruction (plasty), Main (trunk)
- c) Valve surgery, Other, Pulmonary or neo-pulmonary
- d) Pulmonary stenosis, Supraaortic, Repair

Ascending Aorta – Case #3

Other procedures performed include: pulmonary valvotomy and supra-valvar pulmonary stenosis repair.

How is **pulmonary valvotomy** captured in the procedure list?

- a) **Valvuloplasty, Pulmonary or neo-pulmonary**
- b) PA, reconstruction (plasty), Main (trunk)
- c) Valve surgery, Other, Pulmonary or neo-pulmonary
- d) Pulmonary stenosis, Supra-valvar, Repair

Ascending Aorta – Case #3

Other procedures performed include: pulmonary valvotomy and supra-valvar pulmonary stenosis repair.

How is **pulmonary valvotomy** captured in the procedure list?

a) Valvuloplasty, Pulmonary or neo-pulmonary

b)

c)

d)

| | | |
|-----|---|---|
| 590 | Valvuloplasty, Pulmonary or neo-pulmonary | Valvuloplasty of the pulmonary/neo-pulmonary valve may include a range of techniques including but not limited to: valvotomy with or without bypass, commissurotomy, and valvuloplasty. |
|-----|---|---|

Ascending Aorta – Case #3

Other procedures performed include: pulmonary valvotomy and supra-valvar pulmonary stenosis repair.

How is **supra-valvar pulmonary stenosis repair** captured in the procedure list?

- a) Valvuloplasty, Pulmonary or neo-pulmonary
- b) PA, reconstruction (plasty), Main (trunk)
- c) Valve surgery, Other, Pulmonary or neo-pulmonary
- d) Pulmonary stenosis, Supra-valvar, Repair

Ascending Aorta – Case #3

Other procedures performed include: pulmonary valvotomy and supra-valvar pulmonary stenosis repair.

How is **supra-valvar pulmonary stenosis repair** captured in the procedure list?

- a) Valvuloplasty, Pulmonary or neo-pulmonary
- b) PA, reconstruction (plasty), Main (trunk)**
- c) Valve surgery, Other, Pulmonary or neo-pulmonary
- d) Pulmonary stenosis, Supra-valvar, Repair

Ascending Aorta – Case #3

Other procedures performed include: pulmonary valvotomy and supraaortic pulmonary stenosis repair.

How is **supraaortic pulmonary stenosis repair**

- a) Va
- b) PA**
- c) Va
- d) Pr

| | | |
|-----|---|--|
| 530 | PA, reconstruction (plasty), Main (trunk) | Reconstruction of the main pulmonary artery (MPA) trunk commonly using patch material. Includes reduction main pulmonary arterioplasty. <u>Coding Notes:</u> If balloon angioplasty is performed or a stent is placed in the main pulmonary artery intraoperatively, this code may be used in addition to the balloon dilation or stent placement procedure codes. |
|-----|---|--|

Ascending Aorta procedures

1. Aortic dissection repair (Type A)
2. Aortic aneurysm repair
3. Aortic stenosis, Supravalvar, Repair
4. Aorta, Other

Ascending Aorta – Case #4

Aorta, Other
